## 2.2 Opinions and interpretations

The following type is also included as an additional type in this test report:

LV-700STD, LV-700W, LV-700C, LV-700CW, LV-700W/UC, LV-LV-700C/UC, LV-700STD, LV-700W, LV-700C, LV-700CW, LV-700C/EU, LV-700W/EU

The difference as compared to the tested type is (according to the manufacturer):

Part Nr.	Model Name	Description
8-0001	LV-700STD	Ethernet - No camera
8-0002	LV-700W	WiFi/Bluetooth- No camera
8-0004	LV-700C	Ethernet - With camera
8-0005	LV-700CW	WiFi/Bluetooth- With camera
8-0027	LV-700CW/UC	WiFi/Bluetooth, 3G/4G Modem (US)- with camera (tested type)
8-0014	LV-700W/UC	3G/4GModem(US)/WiFi/Bluetooth/No camera
8-0017	LV-700C/UC	3G/4G Modem(US)with camera
8-0001	LV-700STD	Ethernet - No camera
8-0002	LV-700W	WiFi/Bluetooth- No camera
8-0004	LV-700C	Ethernet - With camera
8-0005	LV-700CW	WiFi/Bluetooth- With camera
8-0006	LV-700C/EU	3G/4G Modem (EU)-With camera
8-0026	LV-700CW/EU	WiFi/Bluetooth, 3G/4G Modem (EU)- with camera
8-0013	LV-700W/EU	3G/4GModem(EU)/WiFi/Bluetooth/No camera

The difference is considered not to imply different radio-characteristics when compared to the tested type. Therefore, this type is not tested, but considered to have the same radio-characteristics as the tested type.

## Section 2.5.2,

RF exposure evaluation is required if the separation distance between the user and/or bystander and the device's radiating element is greater than 20 cm, except when the device operates as follows:

- below 20 MHz and the source-based, time-averaged maximum e.i.r.p. of the device is equal to or less than 1 W (adjusted for tune-up tolerance);
- at or above 20 MHz and below 48 MHz and the source-based, time-averaged maximum e.i.r.p. of the device is equal to or less than  $4.49/f^{0.5}$  W (adjusted for tune-up tolerance), where  $f$  is in MHz;
- at or above 48 MHz and below 300 MHz and the source-based, time-averaged maximum e.i.r.p. of the device is equal to or less than 0.6 W (adjusted for tune-up tolerance);
- at or above 300 MHz and below 6 GHz and the source-based, time-averaged maximum e.i.r.p. of the device is equal to or less than  $1.31 \times 10^{-2} f^{0.6834}$  W (adjusted for tune-up tolerance), where  $f$  is in MHz;
- at or above 6 GHz and the source-based, time-averaged maximum e.i.r.p. of the device is equal to or less than 5 W (adjusted for tune-up tolerance).

In these cases, the information contained in the RF exposure technical brief may be limited to information that demonstrates how the e.i.r.p. was derived.
